

Introduction to Program Evaluation

Presented by the
Delaware Association for Environmental Education

Join the Delaware Association for Environmental Education (DAEE) as we welcome Dr. Rachel Becker-Klein of PEER Associates for an introduction to thoughtful design that supports meaningful evaluation of outdoor programming. As environmental educators we share a common goal to instill an understanding and appreciation of the natural world in our program participants. We spend hours developing and refining programs, but how well do we understand our effectiveness toward achieving our desired impact and how can we determine the information to improve our programs. This workshop will promote understanding of evaluation planning and overview the diversity of methods and techniques to assist you in reviewing and improving your own lessons.

Rachel has been working at PEER Associates since 2005 where she has been involved in evaluation and research projects related to environmental, place-based and STEM education. She has focused on creating embedded and authentic assessment tools and toolkits that organizations can use to build their internal evaluation capacity and become learning organizations. [PEER Associates](#) is based in Vermont and specializes in evaluating and researching existing programs, leading organization development and strategic planning initiatives, and collaborating on the design and building of new programs. A Delaware resident, Rachel enjoys going on walks with her dog and family at the Ashland Nature Center and other places around the area.

When: Tuesday September 12th, 2017, 2:00 pm to 5:00 pm

Where: DuPont Environmental Education Center
1400 Delmarva Lane, Wilmington DE 19801

Cost: \$20
